

Academic Program: UG

Academic Year 2023-24

**Department of
Mechanical Engineering**

**III & IV Semester B.E.
Syllabus**

**SHRI DHARMASTHALA MANJUNATHESHWARA COLLEGE OF
ENGINEERING & TECHNOLOGY,
DHARWAD – 580 002**

(An Autonomous Institution Approved by AICTE & Affiliated to VTU, Belagavi

Accredited by NBA under Tier-1

Ph: 0836-2447465 Fax: 0836-2464638 Web: www.sdmcet.ac.in

It is certified that the scheme and syllabus for III & IV semester B.E. in Mechanical Engineering is recommended by the Board of Studies of Mechanical Engineering Department and approved by the Academic Council, SDM College of Engineering & Technology, Dharwad. This scheme and syllabus will be in force from the academic year 2023-24 till further revision.

Chairman BoS & HoD

Principal

Department of Mechanical Engineering

College Vision and Mission

Vision

To develop competent professionals with human values

Mission

- To have contextually relevant Curricula.
- To promote effective Teaching Learning Practices supported by Modern Educational Tools and Techniques.
- To enhance Research Culture
- To involve Industrial Expertise for connecting classroom content to real life situations.
- To inculcate Ethics and impart soft-skill leading to overall Personality Development.

QUALITY POLICY:

In its quest to be a role model institution, committed to meet or exceed the utmost interest of all the stake holders.

CORE VALUES:

Competency

Commitment

Equity

Team work and Trust

DEPARTMENT VISION AND MISSION

Vision:

To establish a synergetic Mechanical Engineering program anchored in fundamentals and relevant state of the art technologies, thereby enabling the students to achieve all round development for careers in industry and for higher learning, being responsible to society and environment.

Mission:

1. To establish a curricula & syllabi consisting of robust core courses with emphasis on imparting fundamental principles of mechanical engineering coupled with adaptive and relevant electives catering to the cutting edge technologies.
2. To promote interactive teaching practices using modern educational tools & techniques to attain synergy in teaching, research and industrial practices.
3. To imbibe industrial expertise for connecting class room learning to real life situation.
4. To impart soft skills and professional ethics enabling students to achieve an all-round personality development, making them responsive to societal needs and environmental concerns.

Programme Educational Objectives (PEOs):

1. Graduates will be successful in industry, research and higher learning.
2. Graduates will formulate, analyze and solve engineering problems.
3. Graduates will work in teams to address industrial and socially relevant problems / projects.
4. Graduates exhibit awareness and commitment to lifelong learning & practice professional ethics.

Program Outcomes (POs)

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs)

13. **Industrial interactions:** Enhance knowledge of mechanical engineering with industrial practices and standards by exposure to industries.
14. **Role of economics and costing:** Learn the concepts of economics and costing to provide effective solutions to mechanical engineering problems.

ASC: Applied science course, **PCC:** Professional Core Course, **PCCL:** Professional Core Course laboratory, **ESC:** Engineering Science Course, **ETC:** Emerging Technology Course, **PLC:** Programming Language Course, **UHV:** Universal Human Value Course, **AEC:** Ability Enhancement Course, **SEC:** Skill Enhancement Course, **MC:** Mandatory Course, **L:** Lecture, **T:** Tutorial, **P:** Practical, **CIE:** Continuous Internal Evaluation, **SEE:** Semester End Evaluation. **MC:** Mandatory Course. This letter in the course code indicates common to all the stream of engineering. **TD:** Teaching department, **PSB:** Paper Setting Board.

National Service Scheme /Physical Education/Yoga: All students have to register for any one of the courses namely National Service Scheme (NSS), Physical Education (PE) (Sports and Athletics), and Yoga (YOG) with the concerned course coordinator during the first week of respective semester. Activities shall be carried out between III semester to the VI semester (for 4 semesters). Successful completion of the registered course and requisite CIE score is mandatory for the award of the degree. The events shall be appropriately scheduled by the colleges and the same shall be reflected in the calendar prepared for the NSS, PE, and Yoga activities.

SDMCET: Syllabus

These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the course is mandatory for the award of degree.

AICTE activity point: Every regular student, who is admitted to the 4-year degree program, is required to earn 100 activity points in addition to the total credits earned for the program. The activity points earned by the student shall be reflected on the students VIII semester grade card. The activities to earn the points can be spread over the duration of the program. However, the minimum prescribed duration should be fulfilled. Activity points (non-credit) have no effect on SGPA/CGPA and shall not be considered for vertical progression. In case student fails to earn the prescribed activity points; VIII semester grade card shall be issued only after earning the required activity Points. Students shall be eligible for the award of degree only after the release of the VIII semester grade card.

III Semester

22UMAC300

Engineering Mathematics-III

(2- 2 - 0)3

Contact Hours:39

Course Learning Objectives (CLOs):

To have an insight into Fourier series, Fourier transforms, Z-transforms. To solve algebraic, transcendental and ordinary differential equation arising in engineering applications using numerical methods.

Course Outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to Pos (1-12)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Express periodic function as a Fourier series and obtain the various harmonics of the Fourier series expansion for the given numerical data.			1,2
CO-2	Transform the given function using Fourier transforms depending on the nature of engineering applications. Apply Z-transform for series of mathematical conversion to mathematical framework used as digital filter. Solve difference equations using Z-transform.			1,2
CO-3	Obtain series solution of ordinary differential equations.			1,2
CO-4	Make use of the correlation and regression analysis to fit a suitable mathematical model for the statistical data.		1,2	
CO-5	Formulate LPP and obtain optimal solutions using different tools.		1,2	

POs	1	2	3	4	5	6	7	8	9	10	11	12
Mapping Level	1.4	1.4										

Pre-requisites: 1. Differentiation of function.
2. Integration of function.
3. Statistical averages

Course Contents:

Unit-I

Fourier Series: Periodic functions, Dirichlet's condition. Fourier series of periodic functions of period 2π and arbitrary period. Half-range Fourier series. Practical harmonic analysis, examples from engineering field. **8hr**

Unit-II

Fourier Transforms: Infinite Fourier transforms, Fourier sine and cosine transforms. Inverse Fourier transforms. (Simple problems).

Z-Transforms and Difference Equations: Z-transform- definition, Standard Z-transforms, Damping and shifting rules, Initial value and Final value theorems (without proof) problems. Inverse Z-transform. Simple problems. Difference equations- basic definition. Application of Z-transform to solve Difference equations. **9hr**

Unit-III

Special functions: Series solution of Bessel's differential equation leading to $J_n(x)$ - Bessel's function of first kind, Recurrence relations, Generating function of Bessel's functions, orthogonality of Bessel's function. **8hr**

Unit-IV

Curve Fitting: Curve fitting by the method of least squares- fitting the curves of the form $y = ax + b$; $y = ax^2 + bx + c$; $y = ax^b$..

Statistical Methods: Correlation and regression-Karl Pearson's coefficient of correlation -problems. Regression analysis- lines of regression-problems. **7hr**

Unit-V

Linear and Non-Linear programming: Introduction, Mathematical formulation of a L.P.P, basic solution. Geometric (or graphical) method, Simplex method.

Non-Linear Programming – Constrained extremal problems-Lagrange's multiplier method. **7hr**

Contact Hours: 52

Course Learning Objectives (CLOs): The objectives of this course are to make the student to learn, fundamental concepts of thermodynamics, through laws of thermodynamics and applications to analysis of vapor and gas power cycles

Course outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)/ PSOs (13,14)		
		Substantia I Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Apply zeroth law and first law of thermodynamics to closed and open systems for work and heat interactions	1,2	-	3
CO-2	Apply Second law of thermodynamics to closed and open systems for availability and exergy	1,2	-	3
CO-3	Describe behavior of ideal, real gases and reactive gas mixtures	-	1,2	3
CO-4	Explain behavior of pure substances and its application to determine performance of vapor power cycles	-	1,2	-
CO-5	Determine the performance of gas power cycles and its application to gas turbine cycles	-	1,2	-

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	2.4	2.4	1	-	-	-	-	-	-	-	-	-	-	-

Prerequisites: Nil

Course Contents:

Unit - I

Introduction and Review of fundamental concepts of thermodynamics: Zeroth law of thermodynamics. Temperature; scales, thermometry, Importance of temperature measuring instruments. Design of Thermometers.

Work and Heat: Thermodynamic definition of work, Displacement work as a part of a system boundary and Expressions for thermodynamic processes. Shaft work, Electrical work and Heat.

First Law of Thermodynamics: Statement, apply First law to non - cyclic and cyclic processes. Energy, energy as a property, Steady Flow Energy Equation (SFEE) and engineering applications. **10L+2T Hrs**

Unit - II

Second Law of Thermodynamics and Entropy: Limitations of first law of thermodynamics. Devices converting heat to work; (a) In a thermodynamic cycle, (b) In a mechanical cycle. Thermal reservoir, direct heat engine; schematic representation and efficiency. Kelvin - Planck statement of the Second law of Thermodynamics; PMM I and PMM II, Clausius statement of Second law of Thermodynamics, Carnot cycle, Clausius inequality, Statement-proof, Entropy- definition, a property, change of entropy, entropy as a quantitative test for irreversibility, entropy as a coordinate.

Available energy and Exergy: Available energy, Maximum work in a reversible process; useful work; Dead state; availability; Second law efficiency.

8L+2T Hrs

Unit - III

Introduction and Review of Ideal and Real gases: Ideal gas mixtures, Daltons law of partial pressures, Amagat's law of additive volumes, Evaluation of properties of ideal gases. Real gases: introduction, Van-Der Waal's equation, Van-Der Waal's constants in terms of critical properties.

Compressibility factor, compressibility chart and applications.

Thermodynamic relations: Maxwell's equations, TdS equation. Ratio of Heat capacities and Energy equation, Joule-Kelvin effect, Clausius-Clapeyron equation.

Combustion thermodynamics: Theoretical (Stoichiometric) air for combustion of fuels, excess air, mass balance, actual combustion. Exhaust gas analysis. A/F ratio, energy balance for a chemical reaction, enthalpy of formation, enthalpy and internal energy of combustion, combustion efficiency. **8L + 2T Hrs**

Unit - IV

Pure Substances: P-T and P-V diagrams, triple point and critical points, sub-cooled liquid, saturated liquid, mixture of saturated liquid and vapor, saturated vapor and superheated vapor states of pure substance with water as example. Enthalpy of change of phase (Latent heat), Dryness fraction (quality) representation of various processes on T-S & H-S diagrams.

Vapour Power Cycles: Carnot vapour power cycle, simple Rankine cycle, actual vapour power cycles, ideal and practical regenerative Rankine cycles, open and closed feed water heaters, Reheat Rankine cycle and characteristics of an Ideal working fluid in vapour power cycles. **10Hrs**

Unit - V

Gas power cycles

Ericson Cycle, Stirling Cycle, Air standard cycles-Otto cycle, Diesel cycle and Dual cycle, computation of thermal efficiency and mean effective pressure, comparison of Otto, Diesel & Dual cycles.

Gas turbine Cycles: Introduction and classification of gas turbine, gas turbine (Brayton) cycle; description and thermal analysis and methods to improve thermal efficiency of gas turbines, Jet Propulsion. **10 Hrs**

Reference Books:

- 1) P.K.Nag "Engineering Thermodynamics" McGraw Hill Education, 2013
- 2) Sonntag and Borgnakke "Fundamentals of thermodynamics " university of Michigan Wiley Publications 2013

- 3) Yunus A. Çengel, Michael A. Boles "Thermodynamics: An Engineering Approach" McGraw-Hill Higher Education, 2006.
- 4) M.D.Burghardt and J A Harbach "Engineering Thermodynamics " Harpercollins college publishers 1993.

Course Learning Objectives (CLOs): The objectives of this course are to make the student to learn:

1. Basic concepts regarding structure-property-processing relations across all material classes.
2. Modern materials like special steels, Super alloys and Composites.
3. Material selection for a given application.

Course outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)/ PSOs (13,14)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Discuss various crystal structures, imperfections in materials and industrial applications of atomic diffusion.	-	1,2	-
CO-2	Describe mechanical properties, strengthening mechanisms of materials and their significance.	1,2	-	-
CO-3	Interpret the phase diagrams for simple solid solutions and Iron-Iron carbide system.	1	2	3
CO-4	Discuss TTT, CCT curves and heat treatment schemes.	1	2	-
CO-5	Outline the classification, properties and applications of ferrous, nonferrous, ceramics & composites.	-	1	-

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	2.6	2.2	1	-	-	-	-	-	-	-	-	-	-	-

Prerequisites: Nil

Course Contents:

Unit - I

Crystal Structures: Classification of materials, BCC, FCC & HCP crystal structures, imperfections in crystals-point, line & surface defects. Atomic Diffusion: Basic concepts, significance of diffusion, Fick's laws of diffusion, Factors influencing diffusion, Industrial applications of diffusion.

8 Hrs

Unit - II

Mechanical Properties of Metals: Elastic deformation, Plastic deformation, Materials Failure: Fundamentals of fracture – Brittle & ductile fractures, Tensile test, Hardness tests, Fatigue: Cyclic stresses, S-N curve, crack initiation & propagation, fatigue test. Creep: Generalized creep behavior, stresses & temperature effects, creep test.

Strengthening mechanisms: Mechanisms of strengthening in metals-Grain size reduction, solid solution strengthening and strain hardening. **8 Hrs**

Unit - III

Phase Diagrams: Types of solid solutions, Hume – Rothery rules, Lever rule. Classification and construction & interpretations of phase diagrams, Isomorphous, Eutectic, eutectoid & Peritectic systems. Iron-Iron carbon diagram – Construction and Interpretation, development of microstructure in Iron-Carbon alloys. **7 Hrs**

Unit - IV

Phase transformations: Kinetics of phase transformations, homogeneous and heterogeneous nucleation. Micro structural and property changes in Iron carbon alloys, Isothermal transformation diagrams (TTT curves) and continuous cooling transformation diagrams (CCT curves). Heat treatments: Basic concepts, objectives, Annealing – types and applications, Hardening – Hardenability, Jominy end quench test.

Metal alloys: Ferrous alloys and Non-Ferrous Alloys: : Classification, AISI / UNS designations mechanical characteristics of steels and copper/aluminum and its alloys. **8 Hrs**

Unit – V

Composite materials - Definition, classification, types of matrix materials & reinforcements: **PARTICLE-REINFORCED COMPOSITES:** Large-Particle Composites, Dispersion-Strengthened Composites. **FIBER-REINFORCED COMPOSITES:** Influence of Fiber Length, Influence of Fiber Orientation and Concentration, The Fiber Phase, The Matrix Phase. Polymer-Matrix Composites Metal-Matrix Composites, Ceramic-Matrix Composite, Carbon–Carbon Composites, Hybrid Composites, Processing of Fiber-Reinforced Composites. **STRUCTURAL COMPOSITES:** Laminar Composites, Sandwich Panels, Nanocomposites. **Applications** of composite materials. Numerical on determining properties of composites.

Ceramics: A basic concept, Classification, features of glasses, clay products, refractories, abrasives and advanced ceramics & applications. **8 Hrs**

Reference Books:

- 1) William D. Callister, "Materials science & Engg", An Introduction, John Wiley & Sons Inc, 2010.

- 4) Donald R. Askeland Pradeep P. Phule, "The Science and Engineering of Materials", Thomson Books/Cole, 2010.

Course Learning Objectives (CLOs): The objectives of this course are to make the student to learn:

1. Theory behind design, analysis and procedures of rod like members subject to axial force, twisting as well bending load
2. Compound stresses and equations to calculate the same (analytical and graphical)
3. Buckling of columns & calculation of buckling load.
4. Nature of stresses, calculations in thick and thin cylinders.

Course outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)/ PSOs (13,14)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Evaluate stresses and strains for structural members subjected to different loads.	-	1, 2	-
CO-2	Calculate principal stresses and maximum shear stress under combined loading.	-	1, 2	-
CO-3	Compute shear force, bending moment and deflection of beams subjected to different loads.	-	1, 2	3
CO-4	Apply concepts of theory of simple bending and torsion to calculate stresses in elements.	-	1, 2	3
CO-5	Evaluate fatigue strength of machine elements.	-	1, 2	3

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	2	2	1	-	-	-	-	-	-	-	-	-	-	-

Pre-requisites: Nil

Course Contents:

Unit - I

Stress and Strain: Introduction, mechanical properties of materials, Types of materials and their notations, Linear elasticity, Hooke's law, Poisson's ratio, stress-strain relationship, Extension and shortening of a bar, bars with varying cross section

in steps, bars with continuously varying cross sections (circular and rectangular), Elongation due to self-weight, factor of safety, thermal stresses. Volumetric strain, expression for volumetric strain, elastic constants, simple shear stress, shears strain. Design and application of above stresses in simple machine elements of day-to-day life.

8L+2T Hrs

Unit - II

Deflection in beams: Introduction, equation for deflection, slope and moments, double integration method, Macaulay's Method

Bending moment and shear forces in beams: Introduction, types of beams, loads and reactions, shear force and bending moments, sign convention, relationship between shear force and bending moment, shear force and bending moment diagrams for different beams subjected to uniformly distributed load, concentrated load, and couples.

6L+2T Hrs

Unit - III

Stresses in beams: Introduction, theory of simple bending, Euler's equation of bending, shear stresses in beams, shear stresses across rectangular, circular, symmetrical and unsymmetrical and T sections.

Stress analysis, problems on axial, bending, torsional, eccentric loading for simple members of circular & rectangular cross section, stress due to impact loading (no derivation).

6L+1T Hrs

Unit - IV

Fundamentals of Machine Design methodologies:

Role of materials, material selection, factor of safety, calculation of allowable stresses, theories of failure (max. of principal stress theory, shear stress theory, distortion energy theory).

Stress concentration: Effects of stress concentration, problems on stress concentration (discontinuity of max. two discontinuities). Principal stresses using Mohr's circle.

Torsion of circular shaft: Introduction, pure torsion, assumptions, torsion equation, pure torsion equation, power transmitted in circular shaft, Compound Cylinder. Design and application of above stresses in simple machine elements of day-to-day life.

Stress analysis of Shafts: Strength & deflection—ASME code for transmission shafting, including axial loads – (problems not involving more than 2 transmitting elements).

8 Hrs

Unit - V

Fatigue stresses: Introduction, S-N diagram, low cycle fatigue, high cycle fatigue, Endurance limit and life estimation under fatigue loading. Modifying factors – size effect, surface effect, stress concentration effects; Fluctuating stresses, Fatigue strength under fluctuating stresses, Goodman's and Soderberg's relationship; stresses due to combined loading.

6 Hrs

Course Learning Objectives (CLOs): The objectives of this course are to make the student to learn:

1. To conduct experiments for finding mechanical properties of structural materials.
2. To identify whether a specific property of the material is suitable for intended applications.

Course outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)/ PSOs (13,14)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Characterize the properties of materials subjected to tension, compression, bending, torsion and shear.	1, 4, 9	5	6
CO-2	Determine relevant parameters of fatigue and wear tests.	1, 4, 9	5	6
CO-3	Determine the impact strength of given specimen.	1, 4, 9	5	6
CO-4	Estimate the hardness of heat treated/untreated materials.	1, 4, 9	-	6
CO-5	Identify different materials by microstructure examination and detect various defects.	1, 4, 9	5	6

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	3	-	-	3	2	1	-	-	3	-	-	-	-	-

Prerequisites: Nil

Course Contents:

1. Study the microstructure of plain carbon steel, tool steel, gray C.I, SG iron, Brass, Bronze.
2. Determination of material behaviour using Tensile test
3. Determination of material behaviour using Shear test

4. Determination of material behaviour using Compression test
5. Determination of material behaviour using Torsion and bending test
6. Determination of impact behaviour using Izod test
7. Determination of impact behaviour using Charpy test
8. Determination of frictional force and wear using POD apparatus.
9. Brinell, Rockwell and Vicker's Hardness tests.
10. Determination of fatigue life using Fatigue Test
11. Non-destructive test experiments (Demonstration only)
 - (a) Magnetic crack detector,
 - (b) Dye penetrant testing.

Course Learning Objectives (CLOs): The objectives of this course are to make the student to learn:

1. Identify various foundry and forging tools & equipment.
2. Preparation of sand moulds through hands on practice
3. Preparation of forging models using open hearth furnace by performing upsetting, drawing and bending operations.
4. Experimental procedures to determine different properties of sand samples

Course outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)/ PSOs (13,14)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Identify the various tools and operations used in foundry & forging process.	1	-	5
CO-2	Prepare different types of sand moulds using foundry tools and operations.	-	4	-
CO-3	Determine different properties of sand using appropriate tests.	-	4	-
CO-4	Prepare forging models using appropriate tools and operations.	-	4	-

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	3	-	-	2	1	-	-	-	-	-	-	-	-	-

Prerequisites: Nil

Course Contents:

1. Testing of mould sand using Compression and shear test
2. Testing of mould sand using Permeability test
3. Testing of mould sand using Mould hardness test
4. Testing of mould sand using Grain fineness number (GFN) test
5. Testing of mould sand using Clay content test
6. **Foundry Practice:** Use of foundry tools and other equipment. Preparation of moulds (ready to pour) using two boxes, use of split pattern, match plate pattern (only demonstration).
7. **Forging Models:** Preparing forging models involving upsetting, drawing and bending operations.

Contact Hours: 39

Course learning objectives (CLOs): The objectives of this course are to make the student to learn:

1. Importance of making drawings of machine parts as per standards.
2. Detailed drawings of machines parts from assembly drawing and vice versa.
3. Geometrical dimensioning & tolerancing
4. Solid modeling of Screw Jack, Plummer Block using software.

Course outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)/ PSOs (13,14)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Convert the given pictorial views to orthographic views of machine parts/objects.	1	-	-
CO-2	Draw the orthographic views of plates fastened with threaded fasteners.	1	-	-
CO-3	Specify the tolerances on parts using GD & T.	1	2	-
CO-4	Draw part/assembly drawings of simple mechanical devices.	1	-	-
CO-5	Model mechanical parts and relevant assembly using the software.	-	1, 5	-

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	2.6	1	-	-	2	-	-	-	-	-	-	-	-	-

Prerequisites: Nil

Course Contents:

Unit - I

Orthographic views (2D): BIS conventions. Conversion/drawing of pictorial views into orthographic views of simple machine parts with/without section on drawing sheet using drawing instruments.

7Hrs

Unit - II

Thread forms and threaded fasteners: Sectional views of threads, ISO Metric (Internal & External), and square threads. Assembly of two plates using Hexagonal headed bolt and nut with washer, simple assembly using stud with nut and washer on drawing sheet using drawing instruments.

Couplings (2D): Protected type flange coupling assembly on drawing sheet using drawing instruments. **8 Hrs**

Unit - III

GD & T: Part drawings of a press tool representing various geometrical features and their tolerances. **6 Hrs**

Unit - IV

Assembly Drawings (2D): Assembly drawing of Screw jack (Bottle type), assembly drawing of simple jig on drawing sheet using drawing instruments showing tolerances. **11 Hrs**

Unit – V

Computer aided 3D modelling (using Solid edge software): Screw jack- part modelling, assembly, generation of 2D drawings and dimensioning using GD &T. **7 Hrs**

NOTE:

- 1) The QP pattern of IA and SEE are different from that of all other subjects as it involves only drawing work.
- 2) The unit wise marks distribution is also different
Unit -I: 2 Questions, each of 25 marks
Unit-II: 2 Questions, each of 25 marks
Unit-III: 2 Questions, each of 10 marks
Unit-IV: 2 Questions, each of 40 marks
- 3) Unit-V: NO QUESTIONS IN IA OR SEE. (Only for CTA) The QP pattern / assessment of CIE and SEE modalities have been approved by the BOS.

Course Learning Objectives (CLOs):

This course provides an opportunity for the students to enhance their life skills like right understanding leading to the harmonious living in relationship with the self and family enhancing holistic development of the students.

Course Outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs (1-12)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Recite and follow interpersonal relations with peers and the others	6	-	-
CO-2	Comprehend happiness, prosperity and distinguish between body and self	-	6,9	-
CO-3	Comprehend harmony and practice Sanyam and Svasthya	-	9	-
CO-4	Demonstrate the values of human-human interaction and universal values such as Nyaya, Visvasa, and Sammana	7	-	-
CO-5	Clearly visualize the co-relation between lack of Human Values and the prevailing problems and use tangible steps and a roadmap for moving in the cherished direction.	8	9	-

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12
Mapping Level	-	-	-	-	-	2.5	3	3	2	-	-	-

Contents:**Unit-I****Introduction to Value Education:**

- Understanding the need, basic guidelines, content and process for Value Education
- Self-exploration – its content and process; 'Natural Acceptance' and Experiential Validation – as the mechanism for self-exploration
- Continuous Happiness and Prosperity – A look at basic human aspirations
- Right understanding, Relationship and Physical Facilities – The basic requirements for fulfillment of aspirations of every human being.

6 Hrs

Unit-II

Understanding Happiness and Prosperity:

- Understanding Happiness and Prosperity correctly – A critical appraisal of the current scenario and Method to fulfill the above human aspirations:
Understanding and living in harmony at various levels
- Understanding human being as a co-existence of the sentient 'I' and the material 'Body' and the needs of Self ('I') and 'Body' - Sukh and Suvidhā
- Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer).

5 Hrs

Unit-III

Harmony in the Human Being:

- Understanding the characteristics and activities of 'I' and harmony in 'I'
- Understanding the harmony of 'I' with the Body: Sanyam and Svāsthya; correct appraisal of physical needs, meaning of prosperity in detail
- Programs to ensure Sanyam and Svāsthya.

5 Hrs

Unit-IV

Harmony in the Family:

- Understanding harmony in the Family – the basic unit of human interaction
- Understanding values in human-human relationship; meaning of Nyāya and program for its fulfillment to ensure Ubhaya – tripti; Trust (Visvāsa) and Respect (Sammāna) as the foundational values of relationship.

5 Hrs

Unit-V

Understanding Intention and Competence:

- Understanding the meaning of Visvāsa; Difference between intention and competence
- Understanding the meaning of Sammāna, Difference between respect and differentiation; the other salient values in relationship.

5 Hrs

Reference Books:

- 1) R.R.Gaur, R Asthana, and G.P Bagaria. **A Foundation Course in HUMAN VALUES and professional Ethics: 2nd Revised Edn.** EXCEL BOOKS, New Delhi. 2019
- 2) Videos on UHV by AICTE

Exam Duration:3 Hrs.

Course objectives:

- To create different plots and charts
- To compute different functions, conditional functions and make regression analysis
- To carryout iterative solutions for roots, multiple roots, optimization and non-linear regression analysis
- To carryout matrix operations
- To Understand VBA and UDF
- To understand VBA subroutines and Macros
- To carryout numerical integration and solving differential equations using different methods

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs (1-12)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Create different plots and charts	-	1, 2	-
CO-2	Compute different functions, conditional functions and make regression analysis	-	1, 2	-
CO-3	Carryout iterative solutions for roots, multiple roots, optimization, and non-linear regression analysis	-	1, 2	-
CO-4	Carryout matrix operations	-	1, 2	-
CO-5	Explain VBA and UDF, VBA subroutines and Macros	-		1,2
CO-6	Carryout numerical integration and solving differential equations using different methods	-	1,2	-

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12
Mapping level	1.83	1.83	-	-	-	-	-	-	-	-	-	-

Course Contents:

1. **Charting:** Create an XY scatter graph, XY chart with two Y-Axes, add error bars to your plot, create a combination chart

2. **Functions:** Computing Sum, Average, Count, Max and Min, Computing Weighted Average, Trigonometric Functions, Exponential Functions, Using the CONVERT Function to Convert Units
3. **Conditional Functions:** Logical Expressions, Boolean Functions, IF Function, Creating a Quadratic Equation Solver, Table VLOOKUP Function, AND, OR and XOR functions.
4. **Regression Analysis:** Trendline, Slope and Intercept, Interpolation and Forecast, The LINEST Function, Multilinear Regression, Polynomial Fit Functions, Residuals Plot, Slope and Tangent, Analysis Tool Pack.
5. **Iterative Solutions Using Excel:** Using Goal Seek in Excel, Using the Solver to Find Roots, Finding Multiple Roots, Optimization Using the Solver, Minimization Analysis, Non-Linear Regression Analysis.
6. **Matrix Operations Using Excel:** Adding Two Matrices, multiplying a Matrix by a Scalar, Multiplying Two Matrices, transposing a Matrix, inverting a Matrix and Solving System of Linear Equations.
7. **VBA User-Defined Functions (UDF):** The Visual Basic Editor (VBE), The IF Structure, The Select Case Structure, The for Next Structure, The Do Loop Structure, Declaring Variables and Data Types, An Array Function the Excel Object Model, For Each Next Structure.
8. **VBA Subroutines or Macros:** Recording a Macro, coding a Macro Finding Roots by Bisection, Using Arrays, adding a Control and Creating User Forms.

Demonstration Experiments (For CIE)

9. **Numerical Integration Using Excel:** The Rectangle Rule, The Trapezoid Rule, The Simpson's Rule, creating a User-Defined Function Using the Simpson's Rule.
10. **Differential Equations:** Euler's Method, Modified Euler's Method, The Runge Kutta Method, Solving a Second Order Differential Equation

Course Learning Objectives (CLOs):

This course will enable students to master the basic tools of differential & integral calculus, differential equations and partial differential equations and become skilled to formulate, solve and analyze science and engineering problems.

Course Outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs (1-12)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Apply the knowledge of calculus to solve problems related to polar curves, curvature and its applications in determining the bentness of a curve.	-	-	1,2
CO-2	Solve multiple integration and use Beta and Gamma function to solve definite integrals	-	1,2	-
CO-3	Solve first order linear differential equations analytically using standard methods.	-	1,2	-
CO-4	Solve higher order differential equations with constant co-efficients and variable co-efficients.	-	1,2	-
CO-5	Learn partial differentiation to calculate rates of change of multivariate functions. Solve problems related to composite functions and Jacobians. Solve problems on partial differential equations by method of separation of variables.	-	-	1,2

POs	1	2	3	4	5	6	7	8	9	10	11	12
Mapping Level	1.6	1.6	-	-	-	-	-	-		-	-	-

Pre-requisites:

1. Differentiation of function

2. Integration of function.

Course Content:

Unit-I

Differential Calculus: n^{th} order differentiation of standard functions. Leibnitz theorem (Statement only & illustrative examples), Taylor's series for single variable (Statement only & illustrative examples), Maclaurin's series for single variable (Statement only & illustrative examples).

Polar curves-angle between the radius vector and tangent (Formula & illustrative examples), angle between two curves (Formula & illustrative examples). Definition of Curvature and radius of curvature. -Radius of curvature for Cartesian and polar curves (Formulas & illustrative examples). **10hrs**

Unit-II

Integral Calculus: Reduction formula for $\int_0^{\pi/2} \sin^n x dx$, $\int_0^{\pi/2} \cos^n x dx$ and $\int_0^{\pi/2} \sin^n x \cos^m x dx$ (Formula & illustrative examples). Definition of Beta and Gamma functions (illustrative examples). Relation between Beta and Gamma functions (No Proof) (illustrative examples). Evaluation of Double integral (direct and region given), Change of variables. Evaluation of Triple integral (direct examples).

10 hrs.

Unit-III

Ordinary Differential Equations of first order:-

Libnitz's Linear differential equation, Bernoulli's differential equation, Exact differential equations. Orthogonal trajectories. **5 hrs.**

Unit-IV

Differential Equations of higher order

Solution of Second order Linear ordinary differential equation with constant coefficients. Method of variation of parameters. Legendre's homogeneous equations. **8 hrs.**

Unit-V

Partial Differentiation:

Definition of Partial derivative (illustrative examples), Total differentiation (illustrative examples), Differentiation of Composite functions (illustrative examples). Jacobians and its properties (No Proof) (illustrative examples).

Partial Differential Equations (PDE's):

Formation of PDE's by elimination of arbitrary constants /functions. Solution of PDE by variable separable method. 6 hrs.

Text Books

1. **B.S. Grewal:** Higher Engineering Mathematics, Khanna Publishers, 44th edition, 2017.
2. **H.K.Dass & Rajnish Verma,** Higher Engineering Mathematics, 3rd edition, 2014.

Note: 1. Grades (i) PP (ii) NP
2. No semester End Examination
3. Audit (Bridge course).

1. The mandatory non – credit courses Mathematics for III and IV semesters respectively, to the lateral entry Diploma holders admitted to III semester of BE/B.Tech., programs, shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the Continuous Internal Evaluation (CIE). In case, any student fails to register for the said course/fails to secure the minimum 40% of the prescribed CIE marks, he/she shall be deemed to have secured an F grade. In such a case, the student has to fulfill the requirements during subsequent semester/s to appear for CIE.

2. These Courses shall not be considered for vertical progression, but completion of the courses shall be mandatory for the award of degree.

Pre-requisites to take this Course:

1. Students should have a service-oriented mind set and social concern.
2. Students should have dedication to work at any remote place, anytime with available resources and proper time management for the other works.
3. Students should be ready to sacrifice some of the time and wishes to achieve service-oriented targets on time.

Course Learning Objectives:

1. Understand the community in which they work.
2. Identify the needs and problems of the community and involve them in problem-solving.
3. Develop among themselves a sense of social & civic responsibility & utilize their knowledge in finding practical solutions to individual and community problems.
4. Develop competence required for group-living and sharing of responsibilities & gain skills in mobilizing community participation to acquire leadership qualities and democratic attitudes.
5. Develop capacity to meet emergencies and natural disasters & practice national integration and social harmony.

Course Outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO1	Understand the importance of his / her responsibilities towards society.	12	6	8
CO2	Analyze the environmental and societal problems/issues and will be able to design solutions for the same.	12	6	8
CO3	Evaluate the existing system and to propose practical solutions for the same for sustainable development.	12	6	8,
CO4	Implement government or self-driven projects effectively in the field.	12	6	8

POs	1	2	3	4	5	6	7	8	9	10	11	12
Mapping Level	-	-	-	-	-	2	-	1	-	-	-	3

Course Contents

1. Waste management– Public, Private and Govt organization.
2. Setting of the information imparting club for women leading to contribution in social and economic issues.
3. Water conservation techniques – Role of different stakeholders– Implementation.
4. Preparing an actionable business proposal for enhancing the village income and approach for implementation.
5. Helping local schools to achieve good results and enhance their enrolment in Higher/ technical/ vocational education.
6. Developing Sustainable Water management system for rural areas and implementation approaches.
7. Contribution to any national level initiative of Government of India. For eg. Digital India, Skill India, Swachh Bharat, Atmanirbhar Bharath, Make in India, Mudra scheme, Skill development programs etc.
8. Spreading public awareness under rural outreach programs.(minimum 2 programs).
9. Social connect and responsibilities.
10. Plantation and adoption of plants. Know your plants.
11. Organize National integration and social harmony events /workshops /seminars. (Minimum 02 programs).
12. Govt. school Rejuvenation and helping them to achieve good infrastructure.

AND

ONE NSS – CAMP @ College /University /State or Central Govt Level /NGO's **/General Social Camps**

Students have to take up any one activity on the above said topics and have to prepare content for awareness and technical contents for implementation of the projects and have to present strategies for implementation of the same. Compulsorily students have to attend one camp.

CIE will be evaluated based on their presentation, approach and implementation strategies.

Course Learning Objectives:

1. The course focuses on overall development and important of Physical Education & Yoga Day to day life.

Course Outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO1	Gaining the importance of Physical Education & yoga	12		8, 9
CO2	Understanding the benefits & preventive measures of health	12	6	8, 9
CO3	Gaining the knowledge of yoga	12		8, 9
CO4	Understanding the importance of Human Body conditioning	12		8, 9
CO5	Get awareness of Modern technology in sports	12		5, 8, 9

POs	1	2	3	4	5	6	7	8	9	10	11	12
Mapping Level	-	-	-	-	1	2	-	1	1	-	-	3

Course Contents**Unit-I**

Introduction to physical education: Meaning and importance, definition, components, benefits of physical education. **04Hrs**

Unit-II

Health and wellness, Anatomy and Physiology: Meaning and importance, definition, components, benefits, health habits, basics of diseases and preventive measures, mental health, physical health, social health, spiritual health. Meaning and definition, first aid, injuries and preventions. **05Hrs**

Unit-III

Introduction of yoga: Origin and history of Yoga, meaning and definition, benefits, importance & Methods of prayer, asana, pranayama, mudras (Suryanamaskara, Standing Asanas, Sitting Asanas, Pron Asanas, Supine Asanas, Pranayama & Mudras **05Hrs**

Unit-IV

Sports training: Meaning and definitions, warming up, cooldown, methods of exercises, stretching, speed, endurance, flexibility, agility and coordination, types of sports training and recovery, Fitness Components, Sports training, Sports & Games. (Speed, Strength, Endurance, Agility, Flexibility, Athletics, Basketball, Kabaddi, Kho Kho, Volleyball, Throwball, Football, Cricket, Handball, Hockey & Indoor games). **05 Hrs**

Unit-V

Modern technology in sports and games: Meaning and definitions, objectives, assisting umpires/ referees, hawk-eye technology, sports specific, computer software, technology in playfields, athletes clothing and equipment, graphics of sports and games, artificial intelligence. **05Hrs**

Contact Hours:39

Course Learning Objectives (CLOs):

To provide an insight into applications of conformal mapping, integration of complex functions and application of probability distributions in Engineering.

Course Outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Construct and use the concepts of analytic function to solve the problems arising in Engineering field.	-	-	1,2
CO-2	Utilize conformal transformation and complex integral to transform irregular domain onto a relatively simple domain.	-	-	1,2
CO-3	Apply discrete and continuous probability distributions in analyzing the probability models arising in engineering field.	-	-	1,2
CO-4	Estimate the correlation, covariance using joint probability distributions. Recite Markov chains and describe stochastic process.	-	-	1,2
CO-5	Use student's t-distribution, Chi-square distribution as a test of goodness of fit.	-	-	1,2

POs	1	2	3	4	5	6	7	8	9	10	11	12
Mapping Level	1	1	-	-	-	-	-	-	-	-	-	-

- Pre-requisites:** 1. Differentiation of function.
2. Integration of function.
3. Basic Probability theory.

Course Contents:

Unit-I

Calculus of complex functions: Review of function of a complex variable, limits, continuity, and differentiability. Analytic functions: Cauchy-Riemann equations in Cartesian and polar forms. Construction of analytic functions: Milne-Thomson method-Problems. **7hr**

Unit-II

Conformal transformations: Introduction. Discussion of transformations:

$w = e^z$; $w = z^2$, $w = z + \frac{1}{z}$, $z \neq 0$). Bilinear transformations- Problems.

Complex integration: Line integral of a complex function, Cauchy's theorem and Cauchy's Integral theorem. **8hr**

Unit-III

Probability Distributions: Random variables (discrete and continuous), probability mass/density functions. Binomial, Poisson, exponential and normal distributions-problems (No derivation for mean and standard deviation)-Illustrative examples. **8hr**

Unit-IV

Joint probability distribution: Joint Probability distribution for two discrete random variables, expectation and covariance.

Markov chains – Introduction, probability vectors, Stochastic Matrices, Fixed points and Regular stochastic matrices, Markov chains, higher transition probabilities, stationary distribution of regular Markov chains and absorbing states. **8hr**

Unit-V

Sampling Theory: Introduction to sampling distributions, standard error, Type-I and Type-II errors. Test of hypothesis for means, student's t-distribution, Chi-square distribution as a test of goodness of fit. **8hr**

Reference Books:

1. **Peter V.O'Neil:** Advanced Engineering Mathematics, International students edition, 2011.
2. **Kishor S. Trivedi:** Probability & Statistics with Reliability, Queuing, and Computer Science Applications, Prentice-Hall of India, 2005.
3. **B.S. Grewal:** Higher Engineering Mathematics, Khanna Publishers, 44th Ed., 2017.
4. **E. Kreyszig:** Advanced Engineering Mathematics, John Wiley & Sons, 10th Ed.(Reprint), 2016.

Course Learning Objectives (CLOs): The objectives of this course are to make the student to learn:

1. Different types of engineering materials used in power transmission elements.
2. Concepts of designing various machine elements and power transmission elements
3. Use of design data handbook and BIS standards.
4. Designing commonly used power transmission elements such as gears, belts, chains, and bearings.

Course outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)/ PSOs (13,14)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Design suitable fasteners, riveted and welded joints subjected to various conditions of loading.	1,3,	-	10
CO-2	Design spur, helical, gears, used for power transmission	1,3,	-	10
CO-3	Design, bevel and worm gears used for power transmission	1,3	-	10
CO-4	Design and select various power transmitting machine elements.	2,3	12	-
CO-5	Design various springs and bearings subjected to different loading conditions.	1,3	9,12	10

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	1	3	3	-	-	-	-	-	2	1	-	2	-	-

Prerequisites: Strength of materials.

Course Contents:

Unit - I

Design of Fasteners: Fastener, initial tension concept eccentrically loaded bolted joints – for Brackets & hangers, Design of Power Screws Mechanics of power screw, stresses in power screws, Efficiency and self-locking.

Riveted joints: Types, failures, design of structural joints – lap & butt joints, eccentric loading **problems to be given as assignment (No boiler Joints)**

Design of welded joints: Lap joint, butt joint, eccentric welded joint subjected to torsional and bending moments **5 + 2T Hrs**

Unit - II

Design of Power transmitting Elements:

Gears: Classification, Force analysis, basic Lewis's equation, (Derivation) concept of weaker gear. Dynamic load, Wear load & Endurance load concepts **Spur gears** – problems.

Helical gears: Terminology formative number of teeth, Design of Helical gears Problems. **7 +2T Hrs**

Unit III

Bevel gears: Terminology – Final design equations (No derivation) problems.

Worm gears: Terminology Strength equations, Heat dissipation considerations Efficiency, design problems **5 +2T Hrs**

Unit - IV

Design of Drives:

Belt & Chain drives: Flat belt: problems – (no derivations) calculations of width & thickness with centrifugal tension. V-Belt: Selection of V – belt. Chain drives: Selection of chains – Power transmitting chains.

Clutch drives: Concept of uniform pressure & wear – determination of Torque & Power for single & multi-plate clutches – Cone clutches (no derivation) – problems.

Brakes: Band brake for different configurations –Shoe brake- problems. **7 + 2 Hrs**

Unit-V

Design of springs: Types, classification, terminology, expression for load and deflection for helical springs of round wire section (with derivations). Design of helical springs for static load & for variable loads, leaf springs (no derivation)

Ball bearings: selection of bearings, Classification – concept of equivalent load, life determination, problems.

Design Optimization: Concept and method of optimization in machine elements, case study **5 + 2T Hrs**

Reference Books:

- 6) K. Mahadevan & Balaveera Reddy, "Design Data Hand Book", CBS Publication, 2014.

Course Learning Objectives (CLOs): The objectives of this course are to make the student to learn:

1. Concepts of heating the metal to molten state and cooling it in a cavity of desired shape and size.
2. Methods of metal forming processes and related aspects.
3. Theory of metal cutting and operations of various machines.
4. Methods of joining two metal pieces with application of heat, with or without pressure and extra metal (filler metal)
5. Different metal additive processes.

Course Outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)/ PSOs (13,14)		
		Substantia I Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Explain the principles of casting, Moulding, Moulding machines and furnaces.	-	1	-
CO-2	Describe high energy rate forming processes.	-	1, 2	-
CO-3	Discuss Theory of metal cutting and Nontraditional machining processes.	1,2	-	-
CO-4	Discuss various metal joining processes.	1,2	-	-
CO-5	Explain the basic concepts of prototyping and related processes.	1,2	-	-

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	2.6	2.7	-	-	-	-	-	-	-	-	-	-	-	-

Course Contents:

Unit – I

Casting principles: Introduction, steps involved in casting process, advantages, disadvantages and applications of the casting process.

Pattern: Definition, materials used for patterns (any four), pattern allowances and their importance, types of patterns.

Sand moulding: Ingredients in moulding sand, types of moulding sand, properties of an ideal moulding sand.

Core: core sand, binders, core making, types of cores.

Moulding Machines: Jolt-squeeze machine moulding, sand slinger, Investment casting, centrifugal casting, continuous casting.

Casting defects: Causes and remedies.

Melting furnaces: Cupola, Induction furnace.

8 Hrs

Unit - II

Metal forming process: Introduction to metal forming processes, Flow curve, Classification based on applied force & temperature. Merits & demerits.

Forging: Introduction, Classification, defects: causes and remedies. Forging load calculations.

Rolling: Introduction, classification of rolling mill, force & geometry relationship, rolling load and power (no derivation), rolling defects: causes and remedies. **7 Hrs**

Unit - III

Theory of Metal Cutting: Single point cutting tool geometry and nomenclature – machine reference (ASA), orthogonal rake system (ORS), Mechanics of chip formation, types of chips, orthogonal and oblique cutting, relationship between chip thickness ratio, shear angle and rake angle in orthogonal machining. Velocity relationships. Merchant's analysis, Merchant's theory.

Cutting tool materials: properties, types.

Tool wear, cutting fluids and Machinability: Types, mechanism, tool life criterion. Taylor's tool life equation. Cutting fluids - desired properties, types, selection. Factors affecting Machinability.

Non-Traditional Machining Processes: Classification, EDM, ECM, and LBM processes. **9 Hrs**

Unit - IV

Metal Joining Processes: Soldering, brazing, Welding - Arc welding, TIG, MIG, SAW, Resistance, Friction, Heat affected zone with analysis.

Advanced metal joining processes: Explosive, Electron beam welding, Laser Beam Welding and thermit welding, **8 Hrs**

Unit - V

Introduction to additive manufacturing: Traditional Prototyping Vs. Rapid Prototyping (RP),

Classification of Rapid Manufacturing Processes: Additive, Subtractive, Formative, Generic RP process. Need for the compression in product development, Survey of applications and classification of RP systems.

Principle, Process parameter, Process details, Application, Advantages and disadvantages of Stereo Lithography Systems, Selective Laser Sintering, Fusion Deposition Modelling, Solid Ground Curing and Laminated Object Manufacturing. Stereo Lithography Systems. **7 Hrs**

Contact Hours: 39

Course Learning Objectives (CLOs): The objectives of this course are to make the student to learn, Fluid and its properties, Laws of static fluids, fluid flow concepts, fluid dynamics, flow through pipes, compressible flow and boundary layer concepts.

Course outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)/ PSOs (13,14)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Evaluate fluid properties and pressure of fluid flow	1, 2	-	-
CO-2	Determine hydrostatic forces on submerged surfaces and kinematic properties of fluid.	1, 2	-	-
CO-3	Apply laws governing fluid dynamics to flow measurement and carry out dimensional analysis.	1, 2	-	3
CO-4	Apply equations of fluid friction for flow through pipes.	1, 2	-	3
CO-5	Explain the concepts of boundary layer theory and its applications.	-	1, 2	-

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	2.8	2.8	1	-	-	-	-	-	-	-	-	-	-	-

Prerequisites: Nil

Course Contents:

Unit - I

Properties of fluids, Fluid Statics: Review of fluid properties and numericals, Pascal's law, pressure variation in static fluid, manometers (simple, differential U tube and micro manometers). Mechanical gauges

6L+2T Hrs

Unit - II

Submerged surfaces & Floatation: Hydrostatic force on submerged plane surfaces (horizontal, vertical and inclined). Buoyancy and stability criteria

Fluid Kinematics: Fluid flow concepts, types of flow, lines of flow, continuity equation, stream function and velocity potential function for 2D flow, Relationship between them and flow nets **6L+2T Hrs**

Unit - III

Dimensional Analysis: Dimensions of physical quantities, dimensional homogeneity-Buckingham's pi theorem, the Rayleigh's method, important dimensionless numbers, Critical Reynolds number, similitude.

Fluid Dynamics & its applications: Euler's Equation of motion, Bernoulli's equation, venturi meter, orifice meter, pitot tube, V- notch, Rota meter, Hot wire Anemometer and Methods of fluid flow visualization. Navier stoke equation (no derivation), **6L + 2T Hrs**

Unit - IV

Flow through Pipes: Laminar and turbulent flow, flow through circular pipe, Hagen Poisuille's equation, power absorbed in viscous flow, minor and major losses in pipe flow: Darcy equation Chezy equation, flow network,- Energy line and hydraulic gradient line **8 Hrs**

Unit - V

Boundary layer theory: Hydrodynamic boundary layer, boundary layer thickness, displacement, momentum & energy thickness, (Qualitative discussions and No derivations) Flow over a flat plate, Flow inside a pipe. Flow past immersed Bodies: Lift and Drag force, Introduction to Compressible fluid flow and CFD. **7 Hrs**

- 7) R.W Fox , A T McDonald T J Pritchard "Introduction to Fluid Mechanics" 6th edition, John wiley and sons. 2004

Course Learning Objectives (CLOs): The objectives of this course are to make the student to learn:

1. Importance/need of mechanical measurements and metrology in day-to-day practical life.
2. Different measurements systems and the errors associated with them.
3. Importance of calibration of measurement instruments.
4. Various Sensors, traducers and strain gauges employed in measuring system.
5. Linear and angular measurements and calibration.

Course outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)/ PSOs (13,14)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Calibrate pressure gauge, thermocouple, LVDT, load cell and micrometer.	1	4	5
CO-2	Measure angular dimensions using bevel protractor and sine bar.	-	-	1,5
CO-3	Determine screw thread and gear tooth parameters.	-	4	1,5
CO-4	Inspect parts using profile projector, tool maker's microscope and gauges.	1	-	6
CO-5	Determine modulus of elasticity using strain gauges.	-	4	1, 5
CO-6	Measure surface roughness of parts.	-	4	1,5

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	2	-	-	2	1	1	-	-	-	-	-	-	-	-

Prerequisites: Nil

Course Contents:

1. Calibration of Pressure Gauge.
2. Calibration of Thermocouple.
3. Calibration of LVDT.
4. Calibration of Load cell.

5. Determination of modulus of elasticity of a mild steel specimen using strain gauges.
6. Measurements using Optical Projector/Tool maker's Microscope.
7. Determination of angle using Sine Center / Sine bar / bevel protractor.
8. Determination of alignment using Autocollimator / roller set.
9. Determination of Screw thread parameters using two wire / three wire method.
10. Measurements of Surface roughness using Talysurf / mechanical Comparator.
11. Determination of gear tooth profile using gear tooth Vernier / gear tooth micrometer.
12. Calibration of a micrometer using slip gauges.

Demonstration experiments:

1. Use of limit gauges for inspection of components.
2. Checking of circular components for roundness
3. Measurement using Optical Flats

Course Learning Objectives (CLOs): The objectives of this Laboratory are to make the student to learn:

1. Fuel properties such as calorific value, viscosity and flash and fire point.
2. Pressure measurement and application to flow measuring devices
3. Impact of jet on vanes and pressure coefficient of flow across cylinder
4. Evaluation of lift and drag coefficient for standard bodies in wind tunnel experiment

Course outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to Pos (1-12)/ PSOs (13,14)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Determine fuel properties using standard apparatus	-	4,5	3
CO-2	Calibrate flow measuring devices	-	4,5	3
CO-3	Determine minor, major losses in pipe flow and study impact of jet on vanes	-	3, 4	9
CO-4	Determine coefficient of pressure in a flow across cylinder	-	3, 4, 5	9
CO-5	Determine lift and drag forces on standard bodies in wind tunnel.	-	3, 4, 5	9

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	-	-	2.7	2	2	-	-	-	1	-	-	-	-	-

Pre-requisites: Basic principles of Engineering Thermodynamics and Fluid Mechanics.

Course Contents:

1. Determine the flash point and fire point of a given oil using Cleveland open cup apparatus, Pensky-Martin closed cup apparatus, Abels closed cup apparatus.
2. Determine the viscosity of oil using Red wood viscometer and Say-bolt viscometer.
3. Determination of calorific value of solid/liquid fuels using Bomb Calorimeter.
4. Determination of calorific value of gaseous fuels using Junker's Gas Calorimeter.
5. Measurement of pressure using different Manometers for high- and low-pressure measurements (manometers using different manometric fluids).

6. Determine the coefficient of discharge of Orifice meter and Venturimeter.
7. Determine the coefficient of discharge of Notches.
8. Determine the minor losses & major losses.
9. Study of performance of Impact of Jet on flat and curved surfaces.
10. Estimation of distribution of coefficient of pressure on a cylinder at different Reynolds numbers.
11. Calibration of wind tunnel using Pitot tube.
12. Determination of drag and lift coefficient of standard objects using wind tunnel.

Contact Hours: 39

Course Learning Objectives (CLOs): The objectives of this course are to make the student to learn:

1. Need, standards and principles of measurement.
2. Basics of limits, fits and tolerances and their importance to the real manufacturing.
3. Principles of various mechanical elements – such as screws, threads and gears.
4. Basics of measurements systems.
5. Principles of various transducers.
6. Working of force, torque, pressure, temperature, strain measurement systems.

Course outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)/ PSOs (13,14)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Explain standards of measurements and principles of limits, fits & tolerances.	1,	-	13
CO-2	Design limit gauges for internal and external dimensions and explain the working of various comparators.	1, 2	-	-
CO-3	Describe principle of interferometry, screw thread and angular measurement.	1, 2	-	4
CO-4	Explain concepts of advanced metrology and gear measurement.	1	2, 3	
CO-5	Discuss various methods of measurement of force, strain, torque, pressure and temperature.	1, 2	-	-

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Mapping Level	3	2.8	2	1	-	-	-	-	-	-	-	-	1	-

Prerequisites: Nil

Course Contents:

Unit - I

Standards of measurement: Definition and Objectives of metrology, Standards of length - International prototype meter, Imperial standard yard, Wave length standard, subdivision of standards, line and end standard, comparison, calibration of end bars (Numerical), Slip gauges, Wringing phenomena, Indian Standards (M-87, M-112), Numerical problems on building of slip gauges.

System of limits, Fits, Tolerances: concept of limits of size and tolerances, Specification in assembly, Principle of inter changeability and selective assembly, compound tolerances, accumulation of tolerances, definition of fits, types of fits and their designation (IS 919 -1963), geometrical tolerance, positional - tolerances, hole basis system, shaft basis of system. **8 Hrs**

Unit - II

Limit gauges and gauge design: classification of gauges, brief concept of design of gauges (Taylor's principles), Wear allowance on gauges, Types of gauges- plain plug gauge, ring Gauge, snap gauge, limit gauge and gauge materials.

Comparators: Introduction to Comparator, Characteristics, classification of comparators, mechanical comparators -Johnson Mikrokator, Sigma Comparators, Optical Comparators -principles, Zeiss ultra-optimeter, Electric and Electronic Comparators -principles, LVDT, Pneumatic Comparators, back pressure gauges, Solex Comparators. **8 Hrs**

Unit - III

Angular measurement: Angular measurements, Bevel Protractor, Sine Principle and. use of Sine bars, Sine center, use of angle gauges, (numericals on building of angles) Clinometers.

Interferometry and Screw thread measurement: Interferometer Principle of interferometry, autocollimator, Optical flats, Toolmakers microscope. Terminology of screw threads, measurement of major diameter, minor diameter pitch, angle and effective diameter of screw threads by 2-wire and 3-wire methods, Best size wire. **8 Hrs**

Unit - IV

Gear measurement: gear terminology, use of gear tooth Vernier caliper and gear tooth micrometer.

Advanced metrology: Co-ordinate measuring machine (CMM) need, construction, types- applications in measurements and machine tool metrology, Introduction to computer aided inspection. **7 Hrs**

Unit - V

Measurement of Force, Torque and pressure: Principle, platform balance, proving ring, Torque measurement, Prony brake, hydraulic dynamometer. Pressure Measurements, Principle, Bridgeman gauge, Mcloed gauge.

Temperature and strain measurement: Thermocouple, laws of thermocouple, materials used for construction, pyrometer, Optical Pyrometer. Strain Measurements, Strain gauge, gauge factor. **8 Hrs**

Course Learning Objectives (CLOs):

This course provides an opportunity for the students to enhance their life skills like right understanding leading to the harmonious living in relationship with the self and family enhancing holistic development of the students.

Course Outcomes (COs):

Description of the course outcome: At the end of course the student should be able to:		Mapping to POs (1-12)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Recite and follow interpersonal relations with peers and the others	6	-	-
CO-2	Comprehend happiness, prosperity and distinguish between body and self	-	6,9	-
CO-3	Comprehend harmony and practice Sanyam and Svasthya	-	9	-
CO-4	Demonstrate the values of human-human interaction and universal values such as Nyaya, Visvasa, and Sammana	7	-	-
CO-5	Clearly visualize the co-relation between lack of Human Values and the prevailing problems and use tangible steps and a roadmap for moving in the cherished direction.	8	9	-

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12
Mapping level	-	-	-	-	-	2.5	3	3	2	-	-	-

Course Contents:**Unit-I****Introduction to Value Education:**

- Understanding the need, basic guidelines, content and process for Value Education
- Self-exploration – its content and process; 'Natural Acceptance' and Experiential Validation – as the mechanism for self-exploration
- Continuous Happiness and Prosperity – A look at basic human aspirations
- Right understanding, Relationship and Physical Facilities – The basic requirements for fulfillment of aspirations of every human being.

6 Hrs

Unit-II

Understanding Happiness and Prosperity:

- Understanding Happiness and Prosperity correctly – A critical appraisal of the current scenario and Method to fulfill the above human aspirations: Understanding and living in harmony at various levels
- Understanding human being as a co-existence of the sentient 'I' and the material 'Body' and the needs of Self ('I') and 'Body' - Sukh and Suvidhā
- Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer).

5 Hrs

Unit-III

Harmony in the Human Being:

- Understanding the characteristics and activities of 'I' and harmony in 'I'
- Understanding the harmony of 'I' with the Body: Sanyam and Svāsthya; correct appraisal of physical needs, meaning of prosperity in detail
- Programs to ensure Sanyam and Svāsthya.

5 Hrs

Unit-IV

Harmony in the Family:

- Understanding harmony in the Family – the basic unit of human interaction
- Understanding values in human-human relationship; meaning of Nyāya and program for its fulfillment to ensure Ubhaya –tripti; Trust (Visvāsa) and Respect (Sammāna) as the foundational values of relationship.

5 Hrs

Unit-V

Understanding Intention and Competence:

- Understanding the meaning of Visvāsa; Difference between intention and competence
- Understanding the meaning of Sammāna, Difference between respect and differentiation; the other salient values in relationship.

5 Hrs

Reference Books:

- 1) R.R.Gaur, R Asthana, and G.P Bagaria. **A Foundation Course in HUMAN VALUES and professional Ethics**: 2nd Revised Edn. EXCEL BOOKS, New Delhi. 2019
Videos on UHV by AICTE

Course Learning Objectives (CLOs): The students are expected to learn about Electronics, and mechanical components and be monitored by using Arduino/ Raspberry Pi.

- To provide knowledge of different Smart System applications.
- To familiarize students with Arduino/ Raspberry Pi as IDE, programming language & platform.
- To provide knowledge of Arduino boards and basic components.
- Develop skills to design and implement various smart system for mechanical application

Course Outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1 to 3)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Explain Arduino/ Raspberry Pi environment and its applications.	-	1	-
CO-2	Explain Arduino programming with Python/C++.	-	1	-
CO-3	Design Smart systems for Mechanical applications with IOT	2	3	-
CO-4	Explain the need for IDE, compiler, and chip in Arduino/ Raspberry Pi compatible boards with IOT	-	2	-

POs/PSOs	1	2	3	4	5	6	7	8	9	10	11	12
Mapping level	2	2.5	2	-	-	-	-	-	-	-	-	-

Prerequisites: Basics Python Programming/C Programming/C++ Programming

Course contents:

Overview of IoT

Understanding IoT fundamentals, IOT Architecture, protocols, Various Platforms for IoT, Overview of IoT components and IoT Communication Technologies

Getting started with Arduino

Introduction to Arduino, hardware components, download and installation of Arduino IDE and understanding Arduino syntax. Setup computer with Arduino.

Getting started with Raspberry Pi

Introduction to Raspberry Pi, Pin Description of Raspberry Pi, On-board components of Rpi, Installing Raspbian on Pi, First boot and Basic Configuration of Pi

Introduction to Electronics components and Sensors,

Electronics Components, Various basic Industrial sensors, IR Digital sensors, light sensors, Sound sensors, Color IR sensors, and Application of sensors.

Introduction to Engineering Actuators and drive motors,

DC motors, DC gear Motors, stepper motors and servo motors, their application. Driving systems and types of driving systems and their application, H bridge motor drive, advance drive and Direction control of Servo Motor.

Part-A

Problem-1: Study the fundamental software and components and Familiarize with Arduino/Raspberry Pi and perform necessary activities.

Problems-2: To interface LED/Buzzer with Arduino/Raspberry Pi and write a program to turn ON LED for 1 sec after every 2 seconds.

Programs-3: To interface Push button/Digital sensor with Arduino/Raspberry Pi and write a program to turn ON LED when push button is pressed or at sensor detection

Problems-4: To interface DHT11 sensor with Arduino/Raspberry Pi and write a program to print temperature and humidity readings

Problems-5: To interface motor using relay with Arduino/Raspberry Pi and write a

program to turn ON motor when push button is pressed

Experiment-6: To interface Bluetooth with Arduino/Raspberry Pi and write a program to send sensor data to smartphone using Bluetooth.

Experiment-7: To interface Bluetooth with Arduino/Raspberry Pi and write a program to turn ON/OFF when '1'/'0' is received from smartphone using Bluetooth

Experiment-8: Write a program on Arduino/Raspberry Pi to upload temperature and humidity data to the Thingspeak cloud.

Experiment-9: Write a program on Arduino/Raspberry Pi to retrieve temperature and humidity data from the Thingspeak cloud.

Experiment-10 Write a program on Arduino/Raspberry Pi Potentiometer And Ir Sensor Interfacing With Arduino

Experiment-11: Write a program on Arduino/Raspberry Pi to Control Two Actuators by smartphone Using a Bluetooth module.

Part-B

Continuous Internal Evaluation (CIE)

Experiment-1: To get the Arduino to spin a shaft in only one direction using a DC motor

Experiment-2: To control the direction of spin of a DC motor using Arduino UNO and an H Bridge.

Experiment-3: To control the rotation of a servo motor within the range of 0 to 180 degrees with the aid of two switches.

Experiment-4: To measure the flow rate and volume of water using Water Flow Sensor with Arduino

Experiment-5: To measure surface temperature using ESP32 microcontroller with Arduino.

Contact Hours: 13

Course Learning Objective (CLO):

1. Gain a fundamental understanding of basic biological concepts and their relevance to engineering applications.

Course Outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to		Mapping to POs (1-12) /PSOs (13-15)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Demonstrate an understanding of the diverse applications of biomolecules.	1	2,3	13
CO-2	Demonstrate an understanding of the architecture and functioning of the brain, eye, and heart as integral systems in the human body.	2,3	1	-
CO-3	Understand the structure, functions, and bioengineering approaches related to the lungs, kidneys, muscular system, and skeletal system.	13	2,3	1
CO-4	Understand nature-inspired materials and mechanisms.	13	2,3	1
CO-5	Understand the latest trends in bioengineering.	2,3	1	13

POs/PSOs	PO -1	PO -2	PO -3	PO -4	PO -5	PO -6	PO -7	PO -8	PO -9	PO -10	PO -11	PO -12	PSO -13	PSO -14	PSO -15
Mapping Level	1.8	2.4	2.4	-	-	-	-	-	-	-	-	-	2.0	-	-

Course content:**Unit-I**

Biomolecules and their applications: Carbohydrates, Nucleic acids, Proteins, lipids, and Enzymes. **03 Hrs.**

Unit-II

Human organ systems and bio designs - 1: Brain as a CPU system, Eye as a Camera system, Heart as a pump system **03 Hrs.**

Unit-III

Human organ systems and bio-designs - 2: Lungs as purification system, Kidney as a filtration system, Muscular and Skeletal Systems as scaffolds. **02 Hrs.**

Unit-IV

Nature-bioinspired materials and mechanisms: Echolocation, Photosynthesis, Bird flying (GPS and aircrafts), Shark skin (Friction reducing swim suits), Kingfisher beak (Bullet train). Human Blood substitutes. **03 Hrs.**

Unit-V

Trends in bioengineering: Bioprinting techniques and materials, 3D printing of ear, bone, and skin. Electrical tongue and electrical nose in food science, Bioimaging and Artificial Intelligence for disease diagnosis. **02 Hrs.**

Reference Books:

1. Human Physiology, Stuart Fox, Krista Rompolski, McGraw-Hill eBook. 16th Edition, 2022
2. Biology for Engineers, Thyagarajan S., Selvamurugan N., Rajesh M.P., Nazeer R.A., Thilagaraj W., Barathi S., and Jaganthan M.K., Tata McGraw-Hill, New Delhi, 2012.

4. Bioremediation of heavy metals: bacterial participation, by C R Sunilkumar, N Geetha A C Udayashankar Lambert Academic Publishing, 2019.
5. Electronic Noses and Tongues in Food Science, Maria Rodriguez Mende, Academic Press, 2016

Course Learning Objectives (CLOs):

This course will enable students to use Laplace transform to solve differential equations. Analyze and Solve system of linear equation. Understand the concept of vector differentiation and vector integration.

Course Outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO-1	Transform the given function using Laplace transforms and study their properties.	-	-	1,2
CO-2	Apply Laplace transform to solve differential equations.	-	-	1,2
CO-3	Compute the solution of system of equations. Evaluate Eigen values and Eigen vectors for a matrix.	-	1,2	
CO-4	Study vector calculus and compute gradient, divergence, curl of a single valued function.	-		1,2
CO-5	Study vector integration and evaluate Line integrals, Surface integrals and Volume integrals	-		1,2

POs	1	2	3	4	5	6	7	8	9	10	11	12
Mapping Level	1.2	1.2	-	-	-	-	-	-		-	-	-

Pre-requisites:

1. Differentiation of function
2. Integration of function.
3. Elementary row transformation of matrix.
4. Vector algebra.

Course Content:

Unit-I

Laplace Transforms:

Definition and Properties. Laplace transform of elementary functions. Laplace transform of $e^{at}f(t)$ Laplace transform of $t^n f(t)$, Laplace transform of $\frac{f(t)}{t}$, Laplace transforms of Periodic functions and unit-step function–problems. **8 hrs.**

Unit-II

Inverse Laplace Transforms

Inverse Laplace transform -problems with standard, Convolution theorem (without proof) to find the inverse Laplace transform and problems. Solution of linear differential equations using Laplace transform. **8 hrs.**

Unit-III

Elementary Linear Algebra:

Rank of a matrix - Row Echelon form. Test for consistency for system of linear equations. Solution of system of linear equations – Gauss-elimination method (consistency), Gauss-Seidel iterative method. Eigen values and Eigen vectors-Rayleigh's power method. **8 hrs.**

Unit-IV

Vector Calculus:-

Vector Differentiation: Scalar point function and vector point functions. Gradient, Directional Derivative; Curl and Divergence-physical interpretation. Solenoidal and irrotational vectors. Illustrative problems. **8 hrs.**

Unit- V

Vector Integration:

Line integrals, Surface integrals and Volume integrals. Green's theorem, Gauss divergence theorem and Stoke's theorem (only statements). **7hrs.**

Text Books

1. **B.S. Grewal:** Higher Engineering Mathematics, Khanna Publishers, 44th edition, 2017.
2. **Rajesh Verma & H.K.Dass,** Higher Engineering Mathematics,,3rd edition. 2014.

Note: 1. Grades (i) PP (ii) NP
2. No semester End Examination
3. Audit (Bridge course)

1. The mandatory non–credit courses Additional Mathematics I and II prescribed for III and IV semesters respectively, to the lateral entry Diploma holders admitted to III semester of BE/B.Tech., programs, shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the Continuous Internal Evaluation (CIE). In case, any student fails to register for the said course/fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have secured an F grade. In such a case, the student has to fulfill the requirements during subsequent semester/s to appear for CIE.
2. These Courses shall not be considered for vertical progression, but completion of the courses shall be mandatory for the award of degree.

Pre-requisites to take this Course:

- 1) Students should have a service-oriented mind set and social concern.
- 2) Students should have dedication to work at any remote place, anytime with available resources and proper time management for the other works.
- 3) Students should be ready to sacrifice some of the time and wishes to achieve service-oriented targets on time.

Course Learning Objectives:

1. Understand the community in which they work.
2. Identify the needs and problems of the community and involve them in problem-solving.
3. Develop among themselves a sense of social & civic responsibility & utilize their knowledge in finding practical solutions to individual and community problems.
4. Develop competence required for group-living and sharing of responsibilities & gain skills in mobilizing community participation to acquire leadership qualities and democratic attitudes.
5. Develop capacity to meet emergencies and natural disasters & practice national integration and social harmony.

Course Outcomes (COs):

Description of the Course Outcome: At the end of the course the student will be able to:		Mapping to POs(1-12)		
		Substantial Level (3)	Moderate Level (2)	Slight Level (1)
CO1	Understand the importance of his / her responsibilities towards society.	12	6	8
CO2	Analyze the environmental and societal problems/issues and will be able to design solutions for the same.	12	6	8
CO3	Evaluate the existing system and to propose practical solutions for the same for sustainable development.	12	6	8,
CO4	Implement government or self-driven projects effectively in the field.	12	6	8

POs	1	2	3	4	5	6	7	8	9	10	11	12
Mapping Level	-	-	-	-	-	2	-	1	-	-	-	3

Contents ;

1. Waste management– Public, Private and Govt organization.
2. Setting of the information imparting club for women leading to contribution in social and economic issues.
3. Water conservation techniques – Role of different stakeholders– Implementation.
4. Preparing an actionable business proposal for enhancing the village income and approach for implementation.
5. Helping local schools to achieve good results and enhance their enrolment in Higher/ technical/ vocational education.
6. Developing Sustainable Water management system for rural areas and implementation approaches.

CIE and SEE Evaluation (from 2023-24 batch)

Courses with LTP 3-0-0 and 4-0-0 or 2-2-0/3-2-0

Continuous Internal Evaluation (CIE):

- Two Internal Assessment and one Improvement test each of 20 marks and one hour duration.
- Two higher scores from three tests are taken representing 40 marks.
- Question Paper pattern for Internal Assessment: 3 questions of 10 marks each with maximum of two sub divisions. Q.3 is compulsory and one question to be answered from Q.1 and Q.2.
- Course Teacher Assessment (CTA): Minimum two components such as quiz, seminar, written assignment, any technical activity related to course each of 5marks. Total CTA marks-10
- CIE=40 (from tests)+10(from CTA) =50 marks

Semester End Examination (SEE):

- SEE is conducted for 100 marks with 3 hours duration. It is reduced to 50 marks.
- Question Paper pattern for SEE: Five units with built in choice. Each question with maximum of three sub divisions.
- Two questions are to be set from each unit with built in choice, for example Q1 or Q2 in unit –I, Q 3 or Q 4 in unit-II and so on.
- A total of 5 full questions to be answered choosing one full question from each unit. All five units are to be answered compulsorily.
- Each question is of 20 marks.
- The Question paper is to be set for duration of 3 hours both for 3 and 4 credits courses.
- The Question paper is to be set for 100 marks for 3 and 4 credits courses.

ASC(IC)/PCC with LTP 2-0-2, 3-0-2 and 2-2-2

Continuous Internal Evaluation (CIE):

Theory CIE component:

- Two Internal Assessment and one Improvement test each of 20 marks and one hour duration.
- Two higher scores from three tests are taken representing 40 marks.
- Question Paper pattern for Internal Assessment: 3 questions of 10 marks each with maximum of two sub divisions. Q.3 is compulsory and one question to be answered from Q.1 and Q.2.

Course Teacher Assessment (CTA): Totally based on conduction of experiments as set by the course teacher.

Laboratory component assessment:

- 5 marks: for conduction, regularity, involvement, journal writing, etc. Minimum 75% of attendance is compulsory. If the performance is not satisfactory in laboratory the student shall be detained and required to reregister for the course as a whole whenever offered next.
- 5 marks: Lab Test. A Lab test as per the class time table has to be conducted at the end for 50 marks and scale down to 5 marks.
- CIE for integrated course =40 (from IA tests)+10 (from CTA i.e. lab component) =50 marks.
- There will not be any remuneration for Final Lab Test since it is CTA of integrated course.

- Copy of the Marks list to be sent to the concerned course instructor immediately after the completion of test for that batch. Original Marks list to be maintained in the department.
- CIE=40(from tests)+10(from CTA i.e. lab component) =50 marks

Semester End Examination (SEE):

- SEE is conducted for 100 marks with 3 hours duration. It is reduced to 50 marks.
- Question Paper pattern for SEE: Five units with built in choice. Each question with maximum of three sub divisions.
- Two questions are to be set from each unit with built in choice, for example Q1 or Q2 in unit –I, Q 3 or Q 4 in unit-II and so on.
- A total of 5 full questions to be answered choosing one full question from each unit. All five units are to be answered compulsorily.
- Each question is of 20 marks.
- The Question paper is to be set for duration of 3 hours both for 3 and 4 credits courses.
- The Question paper is to be set for 100 marks for 3 and 4 credits courses.

AEC/HSMS/UHV Courses with LTP 1-0-0:

Continuous Internal Evaluation (CIE)

- Two Internal Assessment and one Improvement test each of 20 marks and one hour duration.
- Two higher scores from three tests are taken representing 40 marks.
- Question Paper pattern for Internal Assessment: MCQ 20 questions
- Course Teacher Assessment (CTA): Minimum two components such as quiz, seminar, written assignment, any technical activity related to course etc. each of 5marks. Total CTA marks-10
- CIE=40(from tests)+10(from CTA) =50 marks

Semester End Examination (SEE):

- SEE is conducted for 50 marks of 1 hour duration. There will be 50 MCQs.
- Question Paper pattern for SEE: The question paper will contain 12 MCQ questions drawn from each Unit.
- Students have to answer maximum of 10 questions from each unit.
- All five units are to be answered compulsorily.

For NSS/Physical Education/Yoga Audit Courses with LTP 0-0-2

Continuous Internal Evaluation (CIE)

- All students have to register for any one course in each semester of III to VI with concerned course instructor.
- The department must make a faculty coordinator for the above audit courses and the details of the students must be maintained.
- The concerned course instructor must define the set of activities and its schedule of the conduction in NSS, PE and Yoga by taking approval from Dean Academic Program.
- The course instructor has to conduct the events as per the schedule and maintain the attendance for the same. 75% attendance is mandatory.
- The course instructor must assess the students by conducting the MCQ test for 50 marks to be conducted during the improvement test for other courses.
- The course instructor must send the marks and attendance register to the respective departments.
- The faculty coordinator of the department must maintain the same and arrange for sending the marks to CoE.
