Title: Course Teacher Assessment by Field Studies

Author(s): Dr. Shravan A Kanalli

Scope: Field exposure to the existing traffic conditions of Hubli-Dharwad

Objectives: To provide students with real-time experience of various field survey carried out for analysing the traffic condition.

Methodology / Procedure:

Traffic Engineering is a branch of Civil Engineering which deals with the improvement of traffic performance on road networks through systematic traffic studies, scientific analysis and engineering applications. The various traffic studies primarily include Traffic volume studies, Traffic Speed studies, Origin and Destination studies, Parking studies and Accident studies.

29

In the current Teaching-Learning practice, the students are made to form a group of 5 members. Each group is allotted a topic comprising a traffic study (any one parameter) at a certain location within Hubli-Dharwad. The group shall visit the site, carry out traffic studies in the field and analyse the data. The group shall submit a report containing literature of the study, methodology, traffic data and analysis.

This practice provides the real time experience to the students on traffic data collection and analysis which helps them understand the crux of the traffic problems and difficulties faced during data collection. It will also lead to better understanding of the traffic situation and challenges faced during traffic management.

Outcome: The students will be able to carry out different traffic survey and analyse the existing traffic condition on the given road stretch.
